

CD CARD

ABSTRACT OF THE DISCLOSURE

A CD Card for packaging card like information and digital information in the basic dimensions (length and width) of a business, credit or collectors card. The CD Card is made up of one, two, or three major components. The first component is a
5 small compact disc with dimensions small enough to be contained within the typical dimensions (length and width) of a business card, credit card, or collectors card. The second component is a container shaped like a business, credit, or collectors card in length and width, but with a depth large enough to hold the small
10 compact disc and adaptor (if required) discussed subsequently. The third component is an adaptor designed to position the small compact disc of the first and third embodiments of the present invention correctly in standard CD drives. A second embodiment of the small compact disc may not require an adaptor or case. The
15 adaptor also has dimensions small enough to be contained within the typical dimensions (length and width) of a business card, credit card, or collectors card.
